

DEMONSTRATIONS & TUTORIALS

Tools for GEM Data Analysis

Kamodo plotting of GITM run Jack_Wang_022725_IT_1

Analysis examples: Autoplot with HAPI-accessed data (left) and CCMC Kamodo plotting of GITM model output (right)

MONDAY & TUESDAY | 12:00-1:30 PM | TABLES IN THE CASCO BAY ROOM

Learn the latest techniques directly from the developers!

Live demonstrations and practical tutorials for discovering, accessing, analyzing, and visualizing heliophysics data.

TOOLS AND PRESENTERS

HDRL: HelioCloud + HelioData

Heliophysics Digital Resource Library: cloud-based analysis capability and a new search interface for data.

Presented by Alex Young

HelioCloud for CGS Model Output

Use HelioCloud to analyze CGS model output in a cloud-based environment.

Presented by Eric Winter

CCMC Analysis Tools

Explore CCMC tools and workflows for heliophysics analysis.

Presented by Darren De Zeeuw + Lutz Rastaetter

SPEDAS + PySPEDAS

Desktop and Python-based tools for working with heliophysics data.

Presented by Jim Lewis + Daniel Carpenter

Python + AI + Software Search

Python in Heliophysics Community; AI tools for Heliophysics; Heliophysics Software Search Interface.

Presented by Shawn Polson

Autoplot

Plot and explore data from many sources and formats.

Presented by Jeremy Faden

HAPI

An easy, consistent way to access a wide range of heliophysics data.

Presented by Jon Vandegriff

LEARN FROM THE DEVELOPERS

See the latest capabilities, ask practical questions, and explore new workflows for your GEM research.

ADDITIONAL TOOL SLIDES

Slides will be available from contributors who are not attending the meeting.

CEDAR/GEM Madrigal Database Overview for GEM and CEDAR

Slides available at the meeting.

Slides from Katherine Cariglia

SPDF Services and Capabilities

Slides available at the meeting.

Slides from Eric Grimes

MEET THE DEVELOPERS. SEE THE TOOLS. TAKE HOME NEW TECHNIQUES.
